Environmental Product Declaration

Double Toilet Roll Holder

Programme	The International EPD® System
Programme operator	EPD International AB
Geographical scope	Global
Publication date	2023-07-20
Validity date	2028-07-19
S-P code	09680

In accordance with ISO 14025 and EN 15804:2012+A2:2019/AC:2021

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

Programme information

ISO standard ISO 21930 and CEN standard EN 15804 serves as the core Product Category Rules (PCR)

Product Category Rules (PCR): PCR 2019:14 Construction products, version 1.2.5, Construction EN 15804:2012 + A2:2019/AC:2021 Sustainability of Construction Works

PCR review was conducted by: The Technical Committee of the International EPD® System. Review chair: Claudia A. Peña, University of Concepción, Chile

The International EPD® System: EPD International AB Box 210 60 SE-100 31Stockholm, Sweden, www.environdec.com

Independent third-party verification of the declaration and data, according to ISO 14025:2006:

EPD process certification EPD verification (x

Procedure for follow-up of data during EPD validity involves third party verifier

Yes No 🗴

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

Third party verifier: Prof. Ing. Vladimír Kočí, Ph.D., MBA, LCA Studio

Approved by: The International EPD® System Technical Committee, supported by the Secretariat

Programme information

EPDs within the same product category but registered in different EPD programmes may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison.

How to read this EPD

An Environmental Product Declaration (EPD) is an ISO Type III Environmental Declaration based on ISO 14025 standard. An EPD transparently reports the environmental performance of products or services from a lifecycle perspective. The preparation of an EPD includes different stages, from acquiring raw materials to the end of life of the final product/service. EPDs are based on international standards and consider the entire value chain. Additionally, EPD is a third-party verified document. This EPD includes several sections described below.

General and Program Information

The first part of an EPD has information about the name of the manufacturer and product/service and other general information such as the validity and expiration dates of the document, the name of the program operator, geographical scope, etc. The second page states the standards followed and gives information about the program operator, third-party verifier, etc. The followed Product Category Rule (PCR) is indicated on the second page.

Company and Product Information

Information about the company and the investigated product is given in this section. It sum-

marizes the characteristics of the product provided by the manufacturer. It also includes information about the product such as product composition and packaging.

LCA Information

LCA information is one of the most important parts of the EPD as it describes the functional/declared unit, time representativeness of the study, database(s) and LCA software, along with system boundaries. The table presented in this part has columns for each stage in the life cycle. The considered stages are marked 'X' whereas the ones that are not considered are labeled as 'NR'. Not all EPDs consider the full life cycle assessment for a product's entire life stages. The

'System Boundary' page is also the place where one can find detailed information about the stages and the assumptions made.

LCA Results

The results of the Life Cycle Assessment analysis are presented in table format. The first column in each table indicates the name of the impact category and their measurement units are presented in the second column. These tables show an amount at each life cycle stage to see the impact of different indicators on different stages. Each impact can be understood as what is released through the production of the declared unit of the material—in this case. 1 kg of Toilet Roll

Holder. The benefits of reuse/ produced during production.

About the company

All things considered.

We are The Splash Lab. Restrooms are the most often used spaces and the least considered. We're changing that. We have built on our reputation re-interpreting the rituals around hygiene and the restroom experience.

We believe the future is personal. We challenge conventional restroom norms via product innovation to create considered solutions for corporate, commercial, public, hospitality and residential spaces. We use rich raw materials, cutting-edge automation, and modular bathroom systems to powerfully and positively influence the lives of people and the planet.

Sustainability

TSL's award winning products make environmentally conscious restrooms a breeze to specify and a delight to use. For sustainability beyond resource-consciousness, TSL manufactures products in long-wearing stainless steel and solid surface, keeping them out of landfills for years to come.

Inclusivity

We are committed to making restroom products that foster a safe, harmonious, rejuvenating, and functional space for everyone who passes through.

Holistic Design

From the smallest detail of sensor placement to the high quality finishes that bring together your aesthetic vision, we pledge to consider every human element of interaction with our products.

Product information

The Double Toilet Roll Holder is made from cast stainless steel with four colorised finishes. It holds two standard rolls of paper. This product is a representative product among the 'accessories' category of the manufacturer. All the products among this category are made of mainly stainless steel and have very similar material composition. The products are individually checked and the environmental performances between products do not differ more than 10% (by 1 kg consideration). The included products are listed below.

Double Toilet Roll Holder

Also covered by this declaration

Product information

The product investigated in this EPD is the company's double toilet roll holder with a concealed fixing, constructed from stainless steel.

The material composition and packaging information is provided in the tables below.

Raw Material

Stainless steel	79.0%
Brass	3.4%
Paper	14%
Others (foam & plastic fixing plates)	3.6%

Packaging Material

Cardboard	50%
PE film	50%

Technical data

Warranty	1 year from date of purchase
Stainless steel grade	AISI 304
Capacity	2 Rolls
Maximum roll size	Outer Ø: 130mm / Width: 110mm / Inner Ø: 35mm
Weight	0.86kg

System boundary

A1 Raw material supply

This stage includes materials extraction and pre-treatment processes before production. Main materials used in the product are stainless steel, brass, paper and plastic parts. Environmental impacts of these materials are considered at this stage.

A2 Transport

This stage is relevant for the delivery of materials to the production plant. Highway transport is the mean of transport at this stage. Transport distances are provided by the manufacturer as average values.

A3 Manufacturing

This stage includes manufacturing related impacts. The following processes are included: Stainless steel is cast to form the individual components of each accessory and they are PVD-coated separately in a vacuum chamber. The coated components are assebled prior to packaging.

A4 Transport

This stage is relevant for the delivery of product to intended markets. Highway and seaway transportation are involved. Transport distances are provided by the manufacturer as average values.

System boundary

C1 Deconstruction and demolition

This stage includes the impacts during the dismantling of double toilet roll holder. Manual dismantling is assumed, thus no energy or additional material are needed for the dismantling of the product.

C2 Transport

This stage includes the transportation of discarded products to the waste processing/disposal area. 50 km distance by trucks is assumed.

C3 Waste processing

It is assumed that 90% of the metal parts (stainless steel & brass) of the product is recycled whereas the rest is landfilled. Thus, no waste processing is needed.

C4 Disposal

Landfilling impacts are calculated at this stage.

D Reuse, recycling, and recovery potential

The benefits of using stainless steel and brass as a virgin material substitute are considered in this stage.

LCA information

Declared unit	1 kg of the Double Toilet Roll Holder produced by The Splash Lab.
Geographical scope	The geographical scope of this EPD is Global.
System boundary	Cradle to gate with options, modules C1-C4, module D and with optional module A4.
Database and LCA software	Ecoinvent 3.9.1 and SimaPro 9.5.
Period under review	All primary data collected from The Splash Lab is for the year 2022.
Allocations	Water consumption, energy consumption and raw material transportation were weighted according to 2022 production figures. In addition, hazardous and non-hazardous waste amounts were also allocated from the 2022 total waste generation.
Cut-off criteria	1% cut-off applied. Data for elementary flows to and from the product system contributing to a minimum of 99% of the declared environmental impacts have been included.
REACH regulation	No substances included in the Candidate List of Substances of Very High Concern for authorization under the REACH regulations are present in this product either above the threshold for registration with the European Chemicals Agency or above 0.1% (wt/wt)
LCA Modelling, Calculation and Data Quality	The results of the LCA with the indicators as per EPD requirement are given in the LCA result tables. EN158O4 method is followed. All energy calculations were obtained using Cumulative Energy Demand, Low Heating Values (LHV) methodology, while freshwater use is calculated within selected inventory flows in SimaPro according to the PCR. Corresponding regional regional energy datasets were used for all energy related activities.

Acronyms

HWD: Hazardous waste disposed, NHWD: Non-hazardous waste disposed, RWD: Radioactive waste disposed, CRU: Components for reuse, MFR: Material for recycling, MER: Materials for energy recovery, EE (Electrical): Exported energy electrical, EE (Thermal): Exported energy thermal.

Climate impact

Indicator	Unit	A1-A3	A4	C1	C2	С3	C4	D
*GHG-GWP	kg CO ₂ eq	7.26E+OO	4.45E-01	0.00E+00	5.09E-03	0.00E+00	2.17E-O1	-1.36E+OO

GHG-GWP = Global Warming Potential total excl. biogenic carbon following IPCC AR5 methodology

* The indicator includes all greenhouse gases included in GWP-total but excludes biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. This indicator is thus equal to the GWP indicator originally defined in EN 15804:2012+A1:2013
